

1 (one) Research Fellowship Position Selection Minute

Preamble

The selection of a research fellowship position refers to the call for one (1) position for a master student in Mechanical Engineering within the framework of the project UIBD/50022/2020 LAETA - Laboratório Associado de Energia, Transportes e Aeronáutica, with the financial support of FCT/MCTES through national funds (PIDDAC), which ran from 28 July to 12 August 2022 with reference RH BI LAETA UPAL 37/2022.

Applicants list:

- Élio Michael Dias Fernandes
- Rui Filipe Magalhães Couto
- Vasco Daniel Castro Pires

The candidates were evaluated based on the aspects presented in point 5 of the announcement: the academic curricula and their suitability for the proposed work were analysed.

The candidates Rui Couto and Vasco Pires were considered as not meeting the requirements of this call, since the candidates did not demonstrate experience in the study of the behaviour of materials under creep loads. Moreover, these candidates did not have work carried out in the area of adhesive bonding as required in point 5 of this international call.

Based on the curricular evaluation and interview, the jury decided the following classification (0-100), corresponding to the weighted arithmetic mean of each member's marks.

- Élio Michael Dias Fernandes (90/100)
